INDIEWEBCAMP

large language model

> ***This article is a stub.*** *You can help the IndieWeb wiki by expanding it (https://indieweb.org/wiki/index.php?title=large_language_model&action=edit) with relevant information.*

A ***large language model*** is (AKA *LLM*) usually a reference to a service, like OpenAI's ChatGPT, that synthesizes text based on a massive set of prose typically crawled and indexed from the open web and other sources and should not be used to contribute content to the IndieWeb wiki; several IndieWeb sites disclaim any use thereof for their content.

Why

This section is a stub. *You can help the IndieWeb wiki by expanding it (https://indieweb.org/wiki/index.php?title=large_language_model&action=edit).*

Why disclaim

With more and more LLM-generated content being published to the web, e.g. by news outlets like Hoodline, people will increasingly look for actual human-written content instead, and disclaiming your use of LLMs will appeal to a larger and larger audience.

How to

This section is a stub. *You can help the IndieWeb wiki by expanding it (https://indieweb.org/wiki/index.php?title=large_language_model&action=edit).*

Understand and manage LLM traffic

Main article: large language model traffic

Promote your work as human created

You can add a *Not By AI (https://notbyai.fyi/)* badge on your website. See some IndieWeb Examples below.

mailsignatures.com (https://www.mail-signatures.com/articles/written-by-human/#how-to-add-a-human-generated-badge-to-your-emails) offers a set of "written by human" badge packs in English, German, and Polish.

Evaluate usage in open source

Open Slopware (https://codeberg.org/small-hack/open-slopware) lists open source software with LLM-generated code and alternatives:

> “The intention of this list is to raise awareness of AI/LLM usage in popular open-source software. Provided below is an informed set of AI-free alternatives for users and developers to consider should their ethical boundaries be crossed or tolerance for risk be exceeded.”

IndieWeb Examples

In rough date order of adding to personal sites:

- Hidde de Vries added a ‘no LLMs involved’ note to the site-wide footer of hidde.blog (https://hidde.blog/) from 17 March 2023

  > No language models were involved in writing the blog posts on here.

- capjamesg since at least 2023-07-14(?) added a "Not By AI" image button on all his blog posts going back to at least 2020 (https://jamesg.blog/2020/08/30/adventures-on-the-indieweb/)
- Aaron Parecki put a "Not by AI" badge in his global website footer (e.g. bottom of https://aaronparecki.com/) next to the IndieWeb/Microformats/Webmention buttons on 2023-10-15.
- Tantek Çelik put a general disclaimer about no use of LLMs for his site on his homepage on 2023-12-31 (https://tantek.com/2023/365/t2/no-large-language-model-llm-used):
- https://tantek.com/#disclaimer

  > No large language models were used in the production of this site. (inspired by RFC 9518 Appendix A ¶ 4)

- Paul Watson put a general disclaimer about no use of LLMs for his site on his blog homepage (https://www.lazaruscorporation.co.uk/blogs/artists-notebook) on 2024-01-04 and also a similar statement and button (by https://notbyai.fyi/) on the footer of all pages on 2024-01-05:

  > No large language models (LLM) or similar AI technologies were involved in writing the blog posts on here.

- to2ds Updated the existing blurb above the fold on the homepage to use the term "LLMs" instead of the generic "AI." [1] (https://toddpresta.com/#nollms) on 2024-01-05. Also added (Not BY AI) written and painted badges to the common footer along with the IndieWeb badge and link.
- fluffy Added a blurb to their about page (https://beesbuzz.biz/about#ai) on 2025-07-23.
- Dr. Matt Lee blocks as much of this as possible. His content is not permitted to be used to train such things. His Libre.fm and 1800www.com projects are changing their mission/focus as result.
- Joe Crawford has a slash page under "/ai" (/artlung.com/ai (https://artlung.com/ai/)) describing his usage and positions on large language models and related technology.
- Mike Kupietz has an ai policy (https://michaelkupietz.com/?p=29934) page describing his philosophical approach and uses of generative AI tools in his creative work, as well as notes addressing many facets of related issues, such as the problem of implicit sexism in his site's AI-generated images (https://michaelkupietz.com/?p=6322), robot blocking and LLM data poisoning to reduce the value of scraped data (https://michaelkupietz.com/algorithms-old-lace-ll

m-poisoning-for-personal-websites/), and others (https://michaelkupietz.com/genre/artificial-intelligence/).

- **Add yourself here…** (see this for more details)

IndieWeb Wiki Examples

Do not use LLMs for content for the wiki:

- in definitions: definition#Do_not_copy_from_LLM_generated_text
- or content in general: wikifying#Do_not_copy_from_LLM_generated_text

Don't even think about using ChatGPT to contribute material to the wiki, because you don't have the ability to know you can contribute it to the public domain / CC0.

- 2024-01-08 The Guardian UK: 'Impossible' to create AI tools like ChatGPT without copyrighted material, OpenAI says (https://www.theguardian.com/technology/2024/jan/08/ai-tools-chatgpt-copyrighted-material-openai)

Other Examples

- IETF example: https://www.rfc-editor.org/rfc/rfc9518.html#appendix-A-4

> "No large language models were used in the production of this document."

- News publication example: https://www.sfchronicle.com/ai_use/
- In March 2026 the World Wide Web Consortium (W3C) Advisory Group issued a Group Note giving feedback on whether LLMs should have any role in standards making: https://www.w3.org/TR/2026/NOTE-llms-standards-20260324/#sotd
- The Not By AI site mentioned above has badges you can use
- ...

IndieWeb opinions

- 2023-03-13 Tantek Çelik: Blog as if there's an #AI being trained to be you based on your blog posts. (https://tantek.com/2023/072/t1/blog-as-if-ai-trained-posts)
- 2026-01-31 Coyote: How LLMs & Chatbots Are Bad For the Indie Web (https://osteophage.neocities.org/essays/bots-bad-indie-web)

Criticism

Hammering bandwidth while disrespecting robots.txt

Main article: large language model traffic

- 2026-02-12 Soblow Xaselgio: *Poisoning the knowledge*
  - 2026-03-19 Soblow Xaselgio: *Addendum*
- 2025-12-02 lux: *Guarding My Git Forge Against AI Scrapers*
- 2025-04-15 Denial (https://adactio.com/journal/21831)

> The worst of the internet is continuously attacking the best of the internet. This is a distributed denial of service attack on the good parts of the World Wide Web.

- 2025-03-17 Please stop externalizing your costs directly into my face (https://drewdevault.com/2025/03/17/2025-03-17-Stop-externalizing-your-costs-on-me.html)

> Over the past few months, instead of working on our priorities at SourceHut, I have spent anywhere from 20-100% of my time in any given week mitigating hyper-aggressive LLM crawlers at scale. [...] If you think these crawlers respect robots.txt then you are several assumptions of good faith removed from reality. These bots crawl everything they can find, robots.txt be damned.

- 2024-06-15 Perplexity AI Is Lying about Their User Agent (https://rknight.me/blog/perplexity-ai-is-lying-about-its-user-agent/)

Encourages disregarding copyright

- https://t.co/1rmFNq7spR short link to 2024-04-06 NYT: How Tech Giants Cut Corners to Harvest Data for A.I. (https://www.nytimes.com/2024/04/06/technology/tech-giants-harvest-data-artificial-intelligence.html) / OpenAI, Google and Meta ignored corporate policies, altered their own rules and discussed skirting copyright law as they sought online information to train their newest artificial intelligence systems.
- 2024-04-30 NYTimes: 8 Daily Newspapers Sue OpenAI and Microsoft Over A.I. (https://www.nytimes.com/2024/04/30/business/media/newspapers-sued-microsoft-openai.html) / The suit, which accuses the tech companies of copyright infringement, adds to the fight over the online data used to power artificial intelligence.

Encourages training on private data

- https://twitter.com/heyitsseher/status/1776823362292969880

> Google quietly changed policies to scrape public Google Doc data to train AI.
>
> Then purposely released new terms of service on "Fourth of July weekend, when people were typically focused on the holiday"
>
> How Tech Giants Cut Corners to Harvest Data for A.I. https://t.co/1rmFNq7spR

Discourages open creativity and sharing

- 2024-03-11 Les Orchard: Dance like the bots aren't watching? (https://blog.lmorchard.com/2024/03/11/dance-for-the-bots/) / TL;DR: Why bother sharing anything on the open web if it's just going to be fodder for extractive, non-reciprocal bots?

- 2024-04-22 The Atlantic: It’s the End of the Web as We Know It (https://www.theatlantic.com/technology/archive/2024/04/generative-ai-search-llmo/678154/)

>

> SEO will morph into LLMO: large-language-model optimization, the incipient industry of manipulating AI-generated material to serve clients' interests.
> [...]
> LLMs aren't people we connect with. Eventually, people may stop writing, stop filming, stop composing—at least for the open, public web.

Labor Impact

- 2026-02-18 Stephanie Vee: *Generative AI is Built on the Exploitation of the Global South*
- 2026-02-17 Frank Landymore (Futurism): *It Turns Out That Constantly Telling Workers They're About to Be Replaced by AI Has Grim Psychological Effects*
- 2026-02-09 Aruna Ranganathan and Xingqi Maggie Ye (Harvard Business Review): *AI Doesn't Reduce Work—It Intensifies It*

> Some workers described realizing, often in hindsight, that as prompting during breaks became habitual, downtime no longer provided the same sense of recovery. (...) Many workers noted that they were doing more at once—and feeling more pressure—than before they used AI, even though the time savings from automation had ostensibly been meant to reduce such pressure.

- 2026-02-04 Megan Carnegie (Fast Company): *Companies replaced entry-level workers with AI. Now they are paying the price*
- 2026-01 Henry: *AI at work is anti-labor by design*
- 2026-01-27 Jess Weatherbed (The Verge): *Pinterest cuts workforce by around 15 percent to focus on AI*
- 2026-01-07 Nick Lichtenberg (Fortune): *AI layoffs are looking more and more like corporate fiction that's masking a darker reality, Oxford Economics suggests* (archived)
- 2025-10-23 Sophie Bandarkar: *The AI Gold Rush Is Cover for a Class War*
- 2025-06-25 Brian Merchant: *AI Killed My Job: Tech workers*

> The title is somewhat tongue-in-cheek; we recognize that AI is not sentient, that it's management, not AI, that fires people, but also that there are many ways that AI can "kill" a job, by sapping the pleasure one derives from work, draining it of skill and expertise, or otherwise subjecting it to degradation.

> I heard from workers who recounted how managers used AI to justify laying them off, to speed up their work, and to make them take over the workload of recently terminated peers. I heard from workers at the biggest tech giants and the smallest startups—from workers at Google, TikTok, Adobe, Dropbox, and CrowdStrike, to those at startups with just a handful of employees. I heard stories of scheming corporate climbers using AI to consolidate power inside the organization. I heard tales of AI being openly scorned in company forums by revolting workers. And yes, I heard lots of sad stories of workers getting let go so management could make room for AI. I received a message from one worker who wrote to say they were concerned for their job—and a follow-up note just weeks later to say that they'd lost it.

- 2025-05-22 Rachel Dobkin (The Independent): *Klarna's AI replaced 700 workers. It now wants some of them back to improve customer service*
- 2025-05-14 Annie Palmer (CNBC): *Klarna CEO says AI helped company shrink workforce by 40%*

- 2025-04-28 Jay Peters (The Verge): *Duolingo will replace contract workers with AI*

Abused to waste developer time

Criticism: LLMs used to waste developer time with fake security bounty bug reports:

- (from the maintainer of curl) 2024-01-02 The I in LLM stands for intelligence (https://daniel.haxx.se/blog/2024/01/02/the-i-in-llm-stands-for-intelligence/)

> Like for the email spammers, the cost of this ends up in the receiving end. The ease of use and wide access to powerful LLMs is just too tempting. I strongly suspect we will get more LLM generated rubbish in our Hackerone inboxes going forward.

Fails basic context dependence

Can fail basic context-dependence, like examples vs commands:

- 2024-06-06 Accidental prompt injection against RAG applications (https://simonwillison.net/2024/Jun/6/accidental-prompt-injection/)

Scraping for training widely rejected

85% of Cloudflare's customers prefer to block GenAI training scrapers:

- 2024-07-03 Declare your AIndependence: block AI bots, scrapers and crawlers with a single click (https://blog.cloudflare.com/declaring-your-aindependence-block-ai-bots-scrapers-and-crawlers-with-a-single-click)

Allows the creation of abusive content for deliberate harm

- 2025-05-22 Someone released an AI model that makes deepfakes of me, without my consent (https://www.zhangjingna.com/blog/2025/5/22/someone-released-an-ai-model-that-makes-deepfakes-of-me-without-my-consent) by Jingna Zhang

Risk of misleading or hazardous output
